NEUXPOWER SOLUTIONS RELEASES NXPOWERLITE™ 2.5

Updated version of presentation compression software available now

London, December 11th 2006 - Neuxpower Solutions today released an updated version of NXPowerLite, the market-leading presentation compression tool.

NXPowerLite radically reduces the size of Microsoft® PowerPoint® files (as well as StarOffice® and OpenOffice.org presentations saved in the PowerPoint format) by intelligently compressing the graphics and embedded documents contained within them. The software makes presentations easier to use, manage, share and store.

NXPowerLite can reduce the size of presentation files by as much as 98% with no discernible loss of quality. Compressed presentations retain the PowerPoint® format and remain fully editable by anybody with a copy of PowerPoint®. The recipient requires no special viewers or plug-ins.

The latest update - version 2.5 - offers improved compatibility with Microsoft Office 2007, along with a simplified registration process for corporate users. It is offered as a free upgrade for existing NXPowerLite 2 users - the fifth since NXPowerLite 2 was launched just over a year ago. Users of NXPowerLite 1 can upgrade for a small charge.

NXPowerLite 2.5 is available to purchase online immediately from www.nxpowerlite.com and all good software resellers. A fully functional trial version can also be downloaded from the website.

About Neuxpower

Established in 1997, Neuxpower Solutions Ltd is a London-based company that develops bespoke and commercial software to help organizations improve their productivity. Products include NXPowerLite, a hugely successful and highly affordable tool that enables users to radically reduce the size of their presentation files with no discernible loss of quality.
